

## Live Chat Software v4.0.0.3 - Communications::Chat & Instant Messaging Software

A completely NEW approach for providing website based live chat software! Chat Stat offers you the ability to see visitors in a REAL TIME Instant Messenger like interface, or our popular fullscreen grid matrix view. As they move around your site, and as people arrive and leave, the list of visitors change. You can send a manual chat invite at any time simply by double clicking on the IP ADDRESS. You can see actively and visually their location on your site using a visual thumbnail that shows you a picture of the page they are on. This thumbnail is live and updates as they move. You can also see what country and city the visitor is from using our GEO LOCATION system. Additionally, you can translate in sixteen languages on the fly within a chat, and allow the visitor to share your screen with you, allowing you keyboard and mouse control. As an administrator of Chat Stat, you will also be able to use our software to view key information about the performance of your operators, your site, as well as future trends. Other features include global call logging, chat history, geoip location, multi user conference room live chat, Salesforce integration, and more!

To see a full list of our features please visit our site at [www.chatstat.com](http://www.chatstat.com). There is a 3 minute overview video located at the top right corner of our home page, and under each heading a more detailed video showing you the abilities of each of our six major feature sets. Please take just a moment and visit our website to watch the videos.

We invite you to try our product for thirty days, with no credit card required, no contract, and no restrictions in use. We think you will find that immediately after installing our live chat software, you will see a noticeable and immediate increase in your web site's effectiveness, in both sales and support.
